EPA Reg. No. 88760-1

FIFRA Section 2(ee) Recommendation: This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by the EPA. All applicable directions, precautions and Conditions of Sale and Warranty on the EPA-registered label are to be followed.

FOR USE AND DISTRIBUTION IN THE STATE OF TEXAS ONLY

For Use of PROOF® in Rag in a Bag® Protocol against Bed Bugs

It is a violation of Federal law to use the product in a manner inconsistent with its labeling.

Rag in a Bag Protocol can be applied to treat items that cannot be sprayed directly with a liquid product, such as electronics, video games, DVD's, books, or shoes and other bed bug harboring items.

1. Put bed bug infested items in a large plastic garbage bag. Do not fill more than 2/3rds full.
2. Apply 1 oz. of PROOF on a facecloth or rag of an approximate size of 1.5 sq.ft.
3. Put 2-4 treated rags into the bag. Use 2 rags for items such as electronics, DVD, clutter, footwear or handbags, and 4 rags for highly absorbent items such as books and clothing. Prevent the items from directly contacting the treated rag by placing a sufficient barrier, such as a plastic sheet, between the rag and the items.
4. Close and seal the bag until it is airtight. Leave the bag sealed for 7 days. For best results store sealed bags at room temperature. Open bag and remove bed bug free items.
5. If dry, the rags and the bags may be reused or disposed in trash. If still moist, allow to dry completely before reuse or disposal.

Always read and follow label directions when using PROOF.
